

FOR IMMEDIATE RELEASE

Mapping the Road to Recovery

El Segundo, CA – June 24, 2008 – The Midwest is currently suffering from the perfect storm of calamity: as rain continues to fall, the levees start to break, and residents in floodplain areas are evacuated, the Red Cross is running out of money.

The financial cost of flood damage in Iowa alone is more than 1 and a half billion dollars, and that tally is expected to rise. KOLD News of Tucson, Arizona, reports that, according to Red Cross officials, a lack of funds is prompting the agency to borrow money to pay for disaster relief for Midwest flooding victims.

Enter Airborne 1. Airborne 1 uses advanced LiDAR technology to create maps of areas such as those affected by the floods. Flood maps in areas like the Midwest require updates to both the flood level used for the maps and to the elevation data used to delineate inundation areas after a major flood event.

Recognizing the area's need for up-to-date maps, Airborne 1 is currently offering a discount to photogrammetry, surveying, and engineering firms in the flooded areas. In addition, Airborne 1 will donate a percentage of all money they make on impacted Midwest LiDAR projects to the Red Cross.

“Airborne 1 has a wealth of experience in floodplain mapping for FEMA, other government agencies, and private industry. We're happy to help out by contributing to both the need for new mapping data in the Midwest and the Red Cross's need for disaster relief funding,” said Todd Stennett, Airborne 1's CEO.

To read more about Airborne 1's discount offer, go to <http://www.airborne1.com/> or call 310-414-7400.

About Airborne 1 Corporation

Airborne 1 Corporation (www.airborne1.com) provides advanced LiDAR technology and asset management for partners in the photogrammetry, surveying and mapping fields. From Turnkey Services, to Software/Training, Rentals, Fractional Ownership Plans, and Franchising Opportunities, Airborne 1 enables professionals worldwide to effectively enter the LiDAR market without having to incur the high costs of owning a sensor. Airborne 1's digital mapping services and solutions include a dedicated team of LiDAR surveying experts, state-of-the-art Optech ALTM sensors, LiDAR data processing analysis and application development, as well as LiDAR field survey coordination and project management.
